SUMMARY

Software Engineering student skilled in developing scalable, production-ready applications with TypeScript, Node.js, and Python. Experienced in system re-architecture, cloud deployment (AWS/Docker), and database cost optimization. Strong analytical problem-solver passionate about building robust, high-efficiency software solutions.

PROJECT EXPERIENCE

DSA SERVICE AND WELFARE

Phase 1: Initial Development (Year 2, Semester 1)

- Objective: Developed a Minimum Viable Product (MVP) to collect and analyze sports facility usage data.
- Tech Stack: Python (Django), Tailwind CSS, and Cloudflare D1.
- Achievement: Successfully implemented a functional prototype for data tracking and statistical reporting.

Phase 2: System Re-Architecture & Optimization (Year 2, Semester 2)

- The Challenge: Encountered high operational costs and performance bottlenecks due to increasing data volume on Cloudflare D1.
- The Solution: Executed a complete system re-architecture, incorporating mini-ERP logic for resource tracking and optimizing the user experience based on traffic analytics.
- Key Improvements:
 - Tech Stack Migration: Transitioned to Node.js (Hono) and TypeScript for better type safety and high-performance execution.
 - Cost Optimization: Migrated high-volume workloads from Cloudflare D1 to a self-managed MySQL environment to stabilize operational expenses.
 - Infrastructure: Implemented Docker for containerization and deployed the application on AWS, ensuring a scalable and consistent production environment.

Phase 3: Feedback Iteration & On-Premise Deployment (Year 3, Semester 1)

- Enhanced UI/UX and feature workflows based on real user feedback from earlier phases.
 - Deployed the production system onto the internal institutional servers, ensuring local network compliance, operational stability, and full self-hosted maintenance.
-

SKILLS

- **Programming Languages** : TypeScript, JavaScript, Python, SQL, Java (basic)
 - **Frontend** : React, Vue.js, Tailwind CSS, HTML5, CSS3
 - **Backend** : Node.js, Hono.js, Express.js, Django (Python)
 - **Database** : MySQL, SQLite, Cloudflare D1, Prisma ORM
 - **DevOps / Cloud** : Docker, AWS (EC2), Git, GitHub, GitLab, Vercel, Cloudflare
 - **Tools** : VS Code, DBBeaver, Figma, Jira, Trello, Postman
 - **AI Tools** : ChatGPT, Claude, Gemini, GitHub Copilot
 - **Soft Skills** : Problem-Solving, Adaptive Learning, Effective Communication, Team Collaboration
-

EDUCATION

UNIVERSITY OF PHAYAO

2024 – PRESENT

Bachelor of Engineering in Software Engineering

GPAX : 3.28
